BirdWatchCam & **G**ardenWatchCam

Capture the Movement, Capture the Moment!

Watch Your Garden Grow!

BIRD WATCH CAM

Millions of people love taking pictures. Millions of people love watching birds. Many millions of people love taking pictures of the birds they watch. The dilemma for most people is that there is never enough time to do either, let alone both! Now there is an EASY and fun way to do both even if you don't have as much time as you would like.

The Bird Watch Cam is a low cost, Easy to use, weather resistant, motion activated Birding Camera, that is easy to mount and target at your bird feeder, birdbath, or anywhere that birds go.

The Bird Watch Cam is designed to sense the motion of birds entering the camera's field of view. Once the motion sensor is activated, the Bird Watch Cam wakes up for 20 seconds to take an average of 20 high quality, time stamped still photos that store on the 2GB SD Card included with your Bird Watch Cam. After taking the photos the Bird Watch Cam goes back to sleep until another bird activates the camera again. This ensures that the Bird Watch Cam's 4AA batteries that are included will last a long time.

GARDEN WATCH CAM

Every year tens of millions of people love designing, planting and caring for their gardens. Gardening brings many hours of relaxation and enjoyment, and instills a feeling of satisfaction at being able to share this beauty with others. However, gardens only lasts as long as the growing season and only those who visit the garden can enjoy its unique splendor. A gardener may remember to take a photo or two but that doesn't capture the total experience.

The Garden Watch Cam does just that by capturing the gardens growth from the first shoots breaking the earth to the graceful surrender of the last petal to cooling nights.

Simple to operate and locate this simple camera will take high quality time lapse photos of your garden at predetermined times for months. Not just Gardens...anything that experiences change over time can be captured. Fall Foliage can be captured in all of its brilliance in hourly intervals, ensuring you never miss that elusive "peak". The blossoming of the Dogwood which overwhelms you with its color is caught in its entirety. Even a house being built whether it's by you or the spider in the garden can be captured throughout the building process.

Product
Specs:
BR00041
BR00041E

Sensor : 1.3 Mega Pixel CMOS
Field of View : 9" x 12"
ZOOMED effect : 1.5 Meters, 2 Meters or 3 Meters
